DATA SHEET

The Agentic AI Immune System for Data in Motion

0.00ms
PRODUCTION LATENCY

Zero
DATA LEAVES YOUR ENVIRONMENT

No
DATA STORED

Catch the one record that quietly went wrong. Before it spreads.

mmune is a 100% read-only overlay on your data estate. It watches every record moving between your systems, flags the faulty one, traces it upstream, and shows what it will break downstream.

Maps Your Estate
Finds your systems and how data moves between them.

Catches It In Flight
Flags bad records before they reach reports or AI.

Dynamic Semantic Mapping
Understands what every field is meant to say.

Shows What a Failure Touches
Traces each failure to its source and to what it breaks.

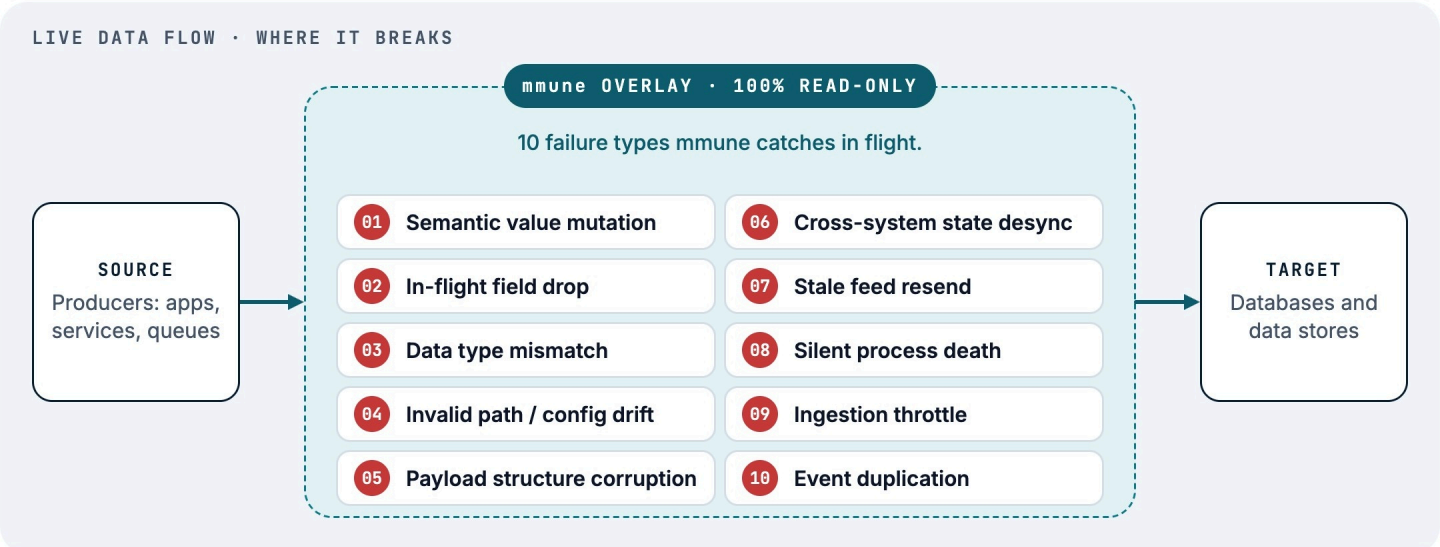

Agents Suggest the Fix
You review and approve.

One View Across Systems
Every system, in sync.

Key Benefits

- ✓ Catch silent errors before they cost you
- ✓ Find issues before customers do
- ✓ Feed reports and AI agents clean data
- ✓ Cut reprocessing and log digging
- ✓ See what changed, and where
- ✓ Read-only: nothing to rip out or replace

Continuously Maps Data Flows to Failure Points

Why Today's Tools Miss It

Every system says it's healthy, while the data between them is quietly going wrong.

Infrastructure APM

Says the pipe is up. Can't see inside.

mmune checks what's inside.

Integration & iPaaS

Moves the data. Doesn't notice when systems drift apart.

mmune notices the drift.

Data Observability

Checks tables after bad records land.

mmune acts while they're in flight.

Agents for the Full Data-Integrity Lifecycle

mmune agents detect a bad record in flight, trace it to its source, show what it touches, and suggest the fix. You review and approve. Humans stay in control.

Your existing tools keep doing their job. mmune covers the data they can't see.

FROM DETECTION TO APPROVED FIX

The Value of mmune

Revenue Protection

- Less revenue lost to problems nobody saw
- Decisions and AI built on data you can trust
- Business logic protected across systems

1

Operational Efficiency

- Teams fix the cause, not the symptom
- Fewer fire drills across teams
- A shared picture of what happened

2

Cost Savings

- Less compute wasted on reruns
- Engineering hours back for building
- Simpler, faster audits

3

See the unseen.
Trust the data between your systems.

About mmune

mmune is the runtime data-integrity layer for cross-system business logic. It sits as a read-only overlay on your estate, so you find silent failures before they reach customers, reports or AI.
